

## **Progress Report: Stage III**

Currently, the progress of the Los Portales Theater Ticketing System is on track and will be ready with the system requirements in four weeks. We have completed setup of creating a user and having the user log-in. The user can see plays and access the seating chart. They can click on a seat and confirm to add the seat to a shopping cart.

Likewise, we have also successfully set up the administrator account to complete administration task. The admin account can successfully create a new play, delete a play, and edit a play. They can also edit the seat prices by viewing the seating chart in an admin view which allows them to set the prices of each seat in the theater for a play. They also have access to create new Admin accounts in the case that more admin accounts are need for employees.

Moreover, we have two more objectives to complete. We need to create the reports section for the admin so that the admin can create reports on sales for a play. They will also have options to include the seats sold and seats available for the report, so that they may be able run different types of reports per play. The second objective is to completely set up the shopping cart for the user. Currently we have the interface and class set up, however we need route the “addToCart” view from the seating chart to the transaction that way a transaction will be completed when a user is ready to checkout.

Lastly, below are images of the current app working with the components mentioned above.
