

Report of Development

Current Details

As of right now, the system has a main home page with a functional login for users. We have created a admin test user to test authentication into Admin areas of the system. The database has also been set up to store user log information and roles.

Future Details

Justyn and Matt are working to configure the user accounts so that users are routed to the correct areas of the app. Nick and Al are working on setting up the data model classes and setting up the controllers for the different components. Once this is complete, Justyn and Matt will start editing the GUI to fit the specifications of the client.
